

## NEOTACTICS, INC

We provide reliable and dependable network services for all classes of companies.

A short list includes Motorola, Nokia, XO Communications, Yahoo!, Google, Ask, AboveNet, General Electric, Wachovia, Safeway, Global Crossings, Sony, CalREN2, Level3, Polycom, Sega, and Deloitte.

Our networks have spanned the globe and supported some of the largest web, bricks and mortar, and service providers on the planet.

Different businesses have different requirements in terms of availability, downtime, and maintenance. We work within your constraints to help close the gap and bring your network in line with your requirements.

A simple approach:

- **Establish** a sound baseline
- **Evaluate** for performance, security, and reliability
- **Effect** change

## OUR BACKGROUND

The most demanding networks around today are those of Internet Service Providers (ISPs). **neoTactics'** consultants were involved with the early pioneering of the commercial Internet. We come from backgrounds that include Global Crossing, XO Communications,, Level 3, Savvis, Cable & Wireless, and more.

We helped to define what 'high availability' means and how to achieve it. Our proven track record comes from intense focus on solving real problems using expertise and well-vetted solutions.

***Don't leave your network in the hands of just anyone.*** Our network consultants have extensive backgrounds with global,

high uptime (99.999%), and secure network infrastructures.

## METHODOLOGY

We know networks and we know how to approach architecting, deploying, and managing them.

It all starts with establishing a foundational baseline:

- What do you need?
- What do you have?
- Where is the gap?

## Requirements

By looking closely at your business and technical requirements and asking incisive questions we can help you quickly figure out the level of reliability, security, and robustness you need for your network — based on your company's actual needs, not on guesswork.

Our client's pay us to help them make critical business decisions for their network infrastructure. By allowing us to help you analyze your requirements you save time and money by making the right decisions the first time.

## Gap Assessment

We help you look closely at your actual network as it stands now either with your own tools or with ours. An analysis, updated network documentation, and insightful questioning helps us to assess the gap between your current state and your actual business-driven technical requirements.

## Remediation

Once assessed we create a game plan that includes rules of engagement for remediation and effecting change. We then help you in effecting our recommended remediation measures.

## NETWORKS THAT TICK

Build networks that do more than work. Build networks that **tick**. Use our proven best practices to move from the mundane to the truly great.

Obvious best practices from a group of industry veterans including:

- Centralized logging
- Strict access control
- Redundant architectures
- Cable and labeling standards

And the non-obvious:

- Physically isolated networks
- Routing protocol redundancy
- Configuration management tools

## ORDER FROM CHAOS

**neoTactics'** networking experts increase reliability and security through domain expertise, clearly defined methodologies, and best practices for delivering highly available secure networks.
